DETAILED ACTION

Claim Rejections - 35 USC § 112

The rejection of claims 13 and 19 under 35 U.S.C. 112, second paragraph, has been overcome by applicant's amendment to the claims.

Claim Rejections - 35 USC § 102

The rejection of claims 1-4, 6-11, and 13-20 under 35 U.S.C. 102(b) as being anticipated by Reichner et al. (US 5,169,730) has been overcome by applicant's amendment to the claims.

Claim Rejections - 35 USC § 103

The rejection of claims 5 and 12 under 35 U.S.C. 103(a) as being unpatentable over Reichner et al. (US 5,169,730) in view of Kelly et al. (EP 1,300,902.) has been overcome by applicant's amendment to the claims.

Allowable Subject Matter

Claims 1-20 are allowed.

The following is an examiner's statement of reasons for allowance:

The instant claims are to an oxidant distribution system for a fuel cell assembly comprising: a fuel cell having at least one oxidant inlet and at least one oxidant outlet, a housing surrounding said fuel cell, and an insulation layer interposed between said housing and said fuel cell, said insulation layer defining at least a first cavity adjacent said at least one oxidant inlet

wherein said insulation layer is an oxidant distributor for channeling oxidant flow to said at least one oxidant inlet of said fuel cell.

The prior art does not teach a fuel cell and oxidant distribution system as claimed including one oxidant inlet and at least one oxidant outlet, a housing surrounding said fuel cell, and an insulation layer interposed between said housing and said fuel cell, wherein the insulation layer defines at least a first cavity adjacent said at least one oxidant inlet wherein said insulation layer is an oxidant distributor for channeling oxidant flow to said at least one oxidant inlet of said fuel cell.

The most pertinent prior art has been cited. Reichner et al. (US 5,169,730) teaches an oxidant distribution system for a fuel cell assembly comprising: a fuel cell having at least one oxidant inlet and at least one oxidant outlet, a housing surrounding said fuel cell, and an insulation layer interposed between said housing and said fuel cell, said insulation layer defining at least a first cavity adjacent said at least one oxidant inlet for channeling oxidant flow to said at least one oxidant inlet (see figures 1-2 and claims 1-18.) An oxidant supply feed is in communication with the cavity. The inlet distribution system includes a second portion that has a larger cross sectional size and mates with the oxidant inlet of the fuel cell in a diffuse manner (see the figures.) The outlet distribution system includes a first portion that has a larger cross sectional size than the outlet of the fuel cell (see the figures.) The insulation is a refractory ceramic such as alumina (see col. 4, lines 15-end.) The fuel cell is high temperature and a solid oxide fuel cell (col. 4, lines 14-35.) The insulation layer taught in Reichner is not an oxidant distributor. The layer does not channel oxidant flow to the oxidant inlet of the fuel cell.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
